The *Kodak* i200/i1300 Plus Series Scanners provide the ability to process scanned images to improve their quality by using image processing features.

Image processing refers to features of the scanner that allow you to automatically adjust each image that may improve the resulting images (i.e., correcting any skew in the fed document, cutting the edges of the image off to remove unneeded borders or cleaning up extraneous "noise" on the image).

	The information in this guide provides procedures for using the TWAIN Datasource as well as descriptions of the features. The same features should be available on the user interface of the scanning application you are using (i.e., <i>Kodak</i> Capture Software). If you are using the ISIS driver, see the <i>Scanning Setup Guide for ISIS</i> <i>Applications</i> on the CD for more information. For the purpose of this manual, all displayed windows assume the features evaluable on the <i>Kodak</i> (1220 pril1220 Scanner (duplay)
	features available on the <i>Kodak</i> i1220 or i1320 Scanner (duplex scanner). If you have a <i>Kodak</i> i1210 or i1310 Scanner (simplex scanner) all options are limited to one-sided scanning only.
Product overview	Our scanners have the capability of providing a wide variety of electronic images. This can be accomplished by using the provided TWAIN Datasource in concert with your scanning application. The TWAIN Datasource is the part of the capture system which links the scanner to your scanning application.
	When using the TWAIN Datasource, the main Scanner window will display a list of Setting Shortcuts. Each Setting Shortcut is a group of specific image and device settings. The supplied Setting Shortcuts represent some common electronic image outputs used for a wide variety of input documents. If none of the Setting Shortcuts meet your scanning needs, you can create a customized Setting Shortcut. For example, you could create a setting shortcut called "Invoices" and whenever you want to scan invoices you simply select that Setting Shortcut. For more details refer to Defining Your Image Output and Defining Your Device Settings.
Capture system	Scanning Application — is the piece of software that controls the capture of images. Use your scanning application to convert paper documents to electronic images and to access the TWAIN Datasource. For more information about your scanning application, see the documentation provided with your application.
	TWAIN Datasource — this guide provides details about using the TWAIN Datasource's user interface that came with your scanner. The scanner's user interface provides many image processing features to help you produce the best possible image to meet your needs. The TWAIN Datasource follows the standards of the TWAIN Working Group. For more information see: http://www.twain.org. For details regarding the programmatic capabilities of the scanner, refer to the Integrators folder on the CD which is included with your scanner.
	Scanner — the image capture device. For more information about your scanner's operation and maintenance, refer to the User's Guide which is included with your scanner.

Starting the Scan Validation Tool

1. Select Start>Programs>Kodak>Document Imaging>Scan Validation Tool.

 Select TWAIN for the Driver Type and the Kodak Scanner i12XX/ i13XX Scanner as the Driver. The Scan Validation Tool dialog box will be displayed.

🥟 Scan Validation Tool - TWA	IN	
🔽 Save Images To Files	Display Every: 1	
Total:	Last File:	

Scan Validation Tool dialog box

The Scan Validation Tool (SVT) is a diagnostic application provided by Kodak. The SVT user interface allows access to all the features of the scanner and is a good way to verify that the scanner is working properly. The Scan Validation Tool allows you to verify scanner functionality using both the TWAIN Datasource and the ISIS Driver.

Toolbar buttons

Setup — displays the user interface for the selected driver.

Destination — allows you to select a directory to store scanned images and their file names. This option is only available when **Save Images to Files** is selected.

Start Scanning — scans the documents in the input tray.

Scan One Page — scans only one page.

Stop Scanning — ends the scan session.

License Key — displays the License Key window

No Image Display mode — closes the Image Viewer window (no images will be displayed).

×

One Image Display mode — displays one image at a time.

Two Image Display mode — displays two images at a time.

Four Image Display mode — displays four images at a time.

FFI

Eight Image Display mode — displays eight images at a time.

Save Images to Files — when selected, will save the images to the specified directory.

Display Every — enter the sampling rate of the images you want to display while scanning. For example, to see every image, enter a value of 1. To see every 10^{th} image, enter a value of 10.

Total — displays the total number of images scanned during the current Scan Validation Tool session.

• To access the TWAIN Datasource double-click the **Setup** icon on the Scan Validation Tool dialog box to access the main Scanner window.

Last File — displays the full path and file name for the last stored image.

How do I begin?

The goal is to make scanning as simple as possible. This is accomplished by selecting a *Setting Shortcut* from the main Scanner window and then selecting **OK/Scan**.

The scanner comes with some Setting Shortcuts already defined. In most cases, you will find that these shortcuts are all you will need. If you find that you need different settings, then you should create your own Setting Shortcut. Your shortcut will be added to the list of Setting Shortcuts and available for all future scanning.

Most of the options you will want are available on these two windows:

- Image Settings: clicking the Settings button on the main Scanner window, displays the Image Settings window. From this window you can set your image processing parameters by using the General, Size, Adjustments and Enhancements tab. You can also access the Device settings by clicking the **Device** button or the Advanced settings by clicking the **Advanced Image Setup** icon.
- **Device** Settings: the Device button is located on the Image Settings window. When you select **Device**, you will have access to the General and Multifeed tabs. From the Device Settings window, you can also access Diagnostics.

The procedures that follow describe how to configure a customized Setting Shortcut. Complete descriptions of the features and options on the main Scanner window and tabs are found in the section entitled, "The main Scanner window".

NOTE: Setting Shortcuts can sometimes be overridden by your scanning application. If this happens, the Shortcut you call will appear in the main Scanner window in italics with the word *<Changed>* next to it. This is normal behavior for an application that does not use Setting Shortcuts and downloads its preferred individual settings to the scanner first and then provides access to the TWAIN Datasource.

When you click **OK** to begin scanning, you will be asked if you want to save the changed settings. When using an application that does not use Setting Shortcut, select **No** to this prompt and continue scanning.

From the main Scanner window:

블 KODAK i1320	Fcanner			
				G
Setting Shortcuts:				
눭 Default				🔜 Sa <u>v</u> e

- 1. Select a predefined Setting Shortcut from the Setting Shortcuts list. Choose a Setting Shortcut that describes as closely as possible the image output you desire.
- 2. Determine if you want to capture an electronic image of the front of your document, back of your document or both sides of your document and make the selection from the *Input document is* drop-down list. Options are:
 - Two Sided captures both sides of the document
 - One Sided-Front captures the front side only
 - One Sided-Back captures the back side only
- 3. Place one or two representative documents in the input tray of the scanner.
 - NOTE: When scanning one side of a document or if you are using an i1210 or i1310 Scanner, be sure to place the side of the document to be scanned facing the input tray.
- If you want to see what your selected image processing options will look like and make on-screen changes, click **Preview** to review and adjust the image.
 - NOTE: This only needs to be done if you want to make interactive adjustments to your selected image processing options.

If you are making interactive adjustments, it is recommended that you preview the image using the highest preview quality.

- 5. If you are satisfied with your selected image processing options, reload your document if necessary and click **OK/Scan**.
 - If the images are acceptable, the image processing settings are fine and you do not need to click the Settings button to alter any values in the General, Size, Adjustments or Enhancements tabs.
 - If the images are not acceptable, you can either select a different predefined Setting Shortcut that more closely describes your desired output or you can continue to work with the Setting Shortcut you have selected by reviewing each setting on the General, Size, Adjustments and Enhancements tabs and make the appropriate changes. When you make any changes, repeat Steps 3 - 5 to until you get the desired results.
- If you made any changes to a predefined default Setting Shortcut, click Save As on the main Scanner window. The Save As dialog box will be displayed.

Save As	×
Shortcut <u>n</u> ame:

7. Enter a new Setting Shortcut name that is meaningful to you and click **Save**. You have now created and saved a custom Setting Shortcut which can be used for your scanning operations.

Selecting Device settings

- 1. Select the Setting Shortcut that you just created.
- 2. Select Settings to access the Image Settings window.
- 3. Select **Device**. The Device Settings window will be displayed.

- 4. Before making any adjustments, click through the tabs on the Device Settings window to get familiar with features that are available. See the section entitled "The Device Settings window" for information about these features.
- 5. Determine which features you want to use when scanning and select the appropriate tab.
- 6. On each tab, select the appropriate options or action you want the scanner to perform.
- 7. When finished:
 - Click **Home** to return to the main Scanner window and click **Save** to save your selections to your custom Setting Shortcut, or
 - Click **Image** to return to the Image Settings window if you need to make additional changes.

The main Scanner window

The main Scanner window is the home window of the scanner's user interface. You can scan by simply selecting a Setting Shortcut and then selecting OK/Scan.

🚽 KODAK i1320 Scanner

Setting Shortcuts — provides a listing of the Setting Shortcuts currently set up. The supplied shortcuts are:

- **Default** the scanner's default settings
- Black and White Document
- Black and White Document (OCR Quality)
- Color Document
- Color Document (OCR Quality)
- Color Photograph

NOTES:

- The six provided Setting Shortcuts **cannot** be deleted. They can only be modified and then saved using a new name.
- Select an OCR Quality shortcut if you want to have the electronic images processed by an OCR application.

 If you have made changes to a Setting Shortcut and have not saved your changes, the Setting Shortcut will be appended with the text <changed>, and the name will be displayed in italics (e.g., *Default<changed>).

📕 ко	DAK i1320 Scanner			
				G 👔

				➡ Move Do <u>w</u> n
	Input document is:	Place documents fac		
2	Two Sided	Place documents fac	ce down	
	Settings >	<u>P</u> review	0 <u>K</u>	Cancel

Input document is — allows you to select which sides of the document has information that you want an electronic image of.

- Two Sided: scans the front and back of the document.
- One Sided Front: scans only the front side of the document.
- **One Sided Back**: scans only the back side of the document.

NOTES:

- Be sure to place your documents face down in the input tray.
- The Two Sided and One Sided Back options are only available for duplex scanner models.

Save — saves any changes made to the current Setting Shortcut. This is only available for shortcuts you have created.

Save As — displays the Save As window allowing you to save your current settings as a new Setting Shortcut.

Delete — deletes the selected Setting Shortcut; you will be prompted for confirmation. This is only available for shortcuts you have created.

Rename — displays the Rename window allowing you to rename a Setting Shortcut. This is only available for shortcuts you have created.

Reset — allows you to undo any changes that have been made to the selected Setting Shortcut. This is only available for shortcuts you have modified (e.g., are in italics and appended with *<changed>*).

Move Up — moves the selected Setting Shortcut up one position in the Setting Shortcut list. When you move a Setting Shortcut, it will stay in that position until you move it again.

Move Down — moves the selected Setting Shortcut down one position in the Setting Shortcut list. When you move a Setting Shortcut, it will stay in that position until you move it again.

Settings — displays the Image Settings window which allows you to make changes to the selected Setting Shortcut. From this window you can also access the Device settings and Diagnostics windows.

Preview — initiates a scan and then displays the Image Settings window with the scanned image placed in the preview area. The image displayed is a sample based on your current shortcut settings.

OK/Scan — when selected, you will be prompted to save any unsaved changes.

NOTE: If this button is **OK**, any unsaved changes will remain in effect for the current scan session.

Cancel — closes the main Scanner window without saving any changes.

Information Icons

About: displays the scanners' version and copyright information.

Help: displays help information for the window currently being displayed.

The Image Settings window

From this window you can define image processing options by using the available tabs. The values used in Image Settings are saved in the selected Setting Shortcut. The Image Settings window includes the following tabs: General, Size, Adjustments and Enhancements.

📕 KODAK	i1320 Scanner			<u>_ </u>
Sid <u>e</u> :	Both		ج 🗈 🗈 🛓 ج	🔒 🏠
General	Size Adjustments Enhancements		1 2 3 4 5	
	Scan as: Black and White (1-bit)	11 11 11 11 11		
	Text with Graphics Media type: Plain Paper	- - - - - - - - -		
Comp	Resolution: 200 dpi ression			
	Type:) Group-4			
	Quality: Best			
		<u> 11 14 14 </u>		×
< 1	<u>+</u> ome De <u>v</u> ice >	<u>P</u> review	0 <u>K</u>	Cancel

Side — allows you to select which side and image to configure (e.g., Front, Back, Both: Color (24-bit), etc.). All image settings will be applied to the selected image.

NOTES:

- The *Side* option is only available when advanced settings have been selected on the Advanced tab.
- The *Both* and *Back* options are only available for duplex scanner models.

Advanced Image Setup: displays the Advanced tab.

Toolbar buttons

⊕ ∕	Zoom In : enlarges the image that is currently being displayed in the preview area.
0*	Zoom Out : reduces the image that is currently being displayed in the preview area.
	Rotate Outline: rotates the outline 90 degrees. NOTE: This is only available if the rotated outline fits in the scanner's maximum width.
	Center Outline : adjusts the X origin of the outline such that the outline is centered within the scanner's maximum width.
<u>*</u> -	 Preview Quality: selects the quality of the scanned image. Normal: displays acceptable image quality at a lower resolution. High: displays the most accurate representation of the actual image. The image that is displayed in the preview area is a good representation of what the final image will look like.
	 Automatic Preview Updates: allows you to select how the displayed image is updated. On: the displayed image will automatically show the effects of your settings changes, in most cases, without having to rescan the document. If rescan is necessary, you will be prompted to reinsert the document. Off: the displayed image will not update until another Preview scan is performed.
•	Units : selects the unit of measurement for the scanner; this includes the preview area and any size-related options. The Units options are: Inches, Centimeters and Pixels .

The preview area displays a sample image that is based on your current shortcut settings. An image will be displayed in this area after a preview scan has been performed.

- Outline: If you choose Document: Manually Select or Image: Part of a document on the Size tab, the preview area will also show the current outline selections. If the outline does not align with your preview image, you may use the mouse to adjust the size and location of the outline. As the mouse cursor moves around the outline, the cursor will change indicating that you can adjust the outline by pressing and holding the left mouse button.
 - **Move**: place the mouse cursor within the outline to adjust the location of the outline.
 - **Corner**: place the mouse cursor over one of the corner graphics to adjust two sides at the same time.

- **Side**: place the mouse cursor over one of the side graphics to adjust that side.

- **Rotate**: place the mouse cursor over the rotate graphic to adjust the angle of the outline.

Home — returns you to the main Scanner window.

Device — displays the Device Settings window.

Preview — initiates a scan and places the image in the preview area. The image displayed is a sample based on your current shortcut settings.

OK/Scan — when selected, you will be prompted to save any unsaved changes.

NOTE: If this button is **OK**, any unsaved changes will remain in effect for the current scan session.

Cancel — closes the main Scanner window without saving any changes.

The General tab contains the commonly used image options. In most cases, you will not have to change options on other tabs.

Scan as — allows you to select the electronic image format.

- Color (24-bit): produces a color version of your document.
- Grayscale (8-bit): produces a grayscale version of your document.
- Black and white (1-bit): produces a black and white version of your document.

NOTE: The *Scan as* option is only available when **Images per Side: One** is selected on the Advanced tab.

Document type — allows you to select the type of content on your documents.

- **Text with Graphics**: the documents contain a mix of text, business graphics (bar graphs, pie charts, etc.) and line art.
- Text: the documents contain mostly text.
- Photographs: the documents contain mostly photographs.

Media type — allows you to select the type of paper you are scanning based on the texture/weight. The options are: Plain Paper, Thin Paper, Glossy Paper, Card Stock, and Magazine.

Resolution or dots per inch (dpi) — allows you to select the dots per inch (dpi), which is a determinant of a better quality image. It may also increase scanning time and image size. The resolutions are: 75, 100, 150, 200, 240, 300, 400, 600 and 1200 dpi.

Compression — allows you to reduce your electronic image size.

- **Type**: the scanner will produce a color version of your document.
 - (none): no compression, which may produce a large image size.
 - **Group-4**: uses a CCITT standard to compress a black and white image, often used in conjunction with TIFF files.
 - **JPEG**: uses JPEG techniques to compress a color/grayscale image.
 - NOTE: The **Group-4** and **JPEG** options are only available for Scan as: Black and White (1-bit).
- **Quality** if you choose JPEG compression, select one of the quality options:
 - **Draft**: maximum compression which produces the smallest image size.
 - **Good**: a fair amount of compression but still produces acceptable image quality.
 - Better: some compression which produces decent image quality.
 - **Best**: minimal compression which produces very good image quality.
 - **Superior**: the least amount of compression which produces the largest image size.

The Size tab allows you to define values relating to the image output (i.e., cropping values, paper size, etc.).

uutline	
Origin (x , y): 0.12 🐺 / 0.00 🛒 in	
Size (W x H): 8.50 - x 11.00 - in	
Angle: 0.0000 🛫 degrees	
Predefined sizes:	<u></u>
US Letter - 8.5 x 11 inches	
<u>B</u> order:	5
(none)	1
Post scan <u>r</u> otation:	
Automatic	
<pre></pre>	iew <u>OK</u> Cancel

Document — allows you to select how the scanner will detect your document as it is being fed through the scanner.

- Automatically Detect and Straighten: the scanner will automatically find each document (regardless of size) and will straighten any document that may have been fed crooked.
- Automatically Detect: the scanner will automatically find each document (regardless of size). If a document is fed crooked, it will not be straightened.
- **Manually Detect**: the scanner will return an image based on the area you specify with the *Outline* options. It is suggested that you only use this option for scan jobs that contain same-size documents.

Image — allows you to select which part of the document you want to use for creating your electronic image.

- Entire document: if you select Document: Automatically Detect and Straighten, Document: Automatically Detect or Document: Manually Detect, returns the entire document.
- Part of the document: if you select Document: Automatically Detect and Straighten, returns the portion of the document which you specify with the *Outline* options.

Outline — allows you to select the location and size to use for creating your electronic image. The preview area will show the outline.

- Origin (x, y):
 - if you select Document: Automatically Detect and Straighten,
 (x) is the distance from the left edge of the document and (y) is the distance from the top edge of the document.
 - if you select **Document: Manually Select**, (x) is the distance from the left edge of the scanner's paper path and (y) is the distance from the first portion of the document detected by the scanner.
- Size (w, h): if you select Document: Automatically Detect and Straighten or Document: Manually Select, this is the width and height of the electronic image.

NOTE: The electronic image may be shorter than you specified if the outline goes beyond the end of the scanned document.

- Angle: allows you to select the angle of the outline.
- **Predefined sizes**: provides a list of commonly used paper sizes. Selecting an item in this list will automatically set the size of the outline to that paper's size. **Custom** will be displayed when the outline size does not match any sizes in the list.

NOTE: You can also adjust the outline displayed in the preview area using your mouse.

Border — allows you to select what action to perform on the edges of your electronic image.

- (none)
- Add: includes up to approximately 0.1 inches of border around all of the image edges.
 - NOTE: This option is not available when both **Document:** Automatically Detect and Straighten and Image: Part of Document are selected.
- **Remove**: produces an image that contains just the document by eliminating any residual border. Residual border can be used by variations in a document edge; for example, when a document is not a perfect rectangle and/or was fed crooked.

NOTES:

- While this option will not remove large amounts of residual border, there is a possibility that a small amount of the document will be lost.
- This option is only available when both **Document:** Automatically Detect and Straighten and Image: Entire Document are selected.

Post-scan rotation options — allows you to select any rotation to be applied to the electronic image after it has been scanned.

- (none)
- Automatic the scanner will analyze each document to determine how it was fed and will rotate the image to the proper orientation.
- 90, 180, 270 degrees the amount of rotation.

The following example shows how these settings effect a document that was fed landscape:

Adjustments tab: black and white

The options available on the Adjustments tab depend on the *Scan* as selection on the General tab. The following options are based on a *Scan* as selection of **Black and White**.

Conversion quality — these settings effect how the scanner analyzes a grayscale version of the document which is used to produce the black and white electronic image.

- Best (iThresholding): the scanner analyzes each document to produce the highest quality image. This option allows scanning of mixed documents with varying quality (i.e., faint text, shaded backgrounds, color backgrounds) and when scanning with consistent document sets.
- Normal (ATP): allows you to determine the optimal settings to produce the desired image quality. This option works best when scanning with consistent document sets. You may also want to use this option if you have difficult documents such that you cannot find a Contrast setting for *Best* that produces the desired quality.
- **Draft (Fixed)**: allows you to select the grayscale threshold used to determine if a pixel is black or white. This option works best for high contrast documents.

Contrast — allows you to make an image sharper or softer. Decreasing this setting will make the image softer and reduce noise in the image. Increasing this setting will make the image clearer and make light information more visible. The options range from **-50** to **50**. The default is 0.

NOTE: This is not available for *Conversion quality: Best* and *Conversion quality: Normal.*

Threshold — aids in controlling the level at which a pixel is considered black or white. Decreasing this setting will make the image appear lighter, and can be used to subdue background noise. Increasing this setting will make the image appear darker, and can be used to help pick up light information. The options range from 0 to 255. The default is 90.

NOTE: This is not available for *Conversion quality: Best* and *Conversion quality: Normal.*

Threshold: 50

Threshold: 127

Filters

- Noise
 - (none)
 - **Lone Pixel:** reduces random noise by converting a single black pixel to white when it is completely surrounded by white pixels or by converting a single white pixel to black when it is completely surrounded by black pixels.
 - **Majority Rule**: sets each pixel based on its surrounding pixels. The pixel will become white if the majority of the surrounding pixels are white and visa versa.
- Image
 - (none)
 - Halftone Removal: enhances dot matrix text and images with halftone screens (e.g., newspaper photographs).

Invert Colors — allows you to select how the black pixels will be stored in the image. By default the black pixels are stored as black and the white pixels are stored as white. Turn this option on if you want the black pixels stored as white and the white pixels stored as black.

Adjustments tab: color or grayscale

The options available on the Adjustments tab depend on the *Scan* as selection on the General tab. The following options are based on a *Scan* As selection of **Color** or **Grayscale**.

🚽 KODAK i1320 Scanner				
Sid <u>e</u> : Both		- 😵	🔍 🔍 📑 🖽 🎽 🗉	- 🛛 - 🚱 🍞
General Size Adjustm	nents Enhancements		1 1 2 3 4 5	
Brightness: Contrast: Bed: Green: Blue:	-50 50			
Sharpe <u>n</u> : Background S <u>m</u> oothing				
Method:	Change to White	┓║		
Apply to: Aggressiveness:	Predominant			
< <u>H</u> ome	De <u>v</u> ice >	<u>P</u> review		Cancel

Brightness — changes the amount of white in the color or grayscale image. The values range from **-50** to **50**. The default is 0.

Contrast — makes the image sharper or softer. The values range from **-50** to **50**. The default is 0.

Red — changes the amount of red in the color image. The values range from **-50** to **50**. The default is 0. *Does not apply to grayscale images*.

Green — changes the amount of green in the color image. The values range from **-50** to **50**. The default is 0. *Does not apply to grayscale images.*

Blue — changes the amount of blue in the color image. The values range from **-50** to **50**. The default is 0. *Does not apply to grayscale images*.

Background Smoothing — using this option for documents or forms with a background color will help produce images with a more uniform background color. This option improves image quality and may reduce file size.

- Method:
 - (none) no background smoothing will be performed.
 - Automatic smooths up to three background colors.
 - **Change to White** identifies up to three background colors and substitutes each color with white.

- Apply to:
 - **Predominant** smooths the predominant background color to white.
 - **Neutral** smooths only the neutral color to white, and also smooths up to two additional background colors.
 - **All** smooths the neutral color and up to two additional background colors to white.

NOTE: The *Apply to* options are only available for **Method: Change to White.**

• Aggressiveness: allows you to adjust the extent at which the background(s) are determined. The values range from -10 to 10. The default is 0. This option is not available for Method: (none).

Enhancements tab

The options on the Enhancements tab depend on the *Scan* as selection on the General tab.

NOTE: Most options have additional settings. Those settings will only be visible when the option is turned on. If all of settings do not fit on the screen, a scroll bar will appear giving you access to all settings.

🚽 KODAK i1320 Scanner					
Sid <u>e</u> : Front		~	8	९ 📑 🗉 🗼 .	• 📭 🚱
Side: Front General Size Adjustmer Hole Eil Image On Blank Image Detection Based on Document Cont Content amount: Image Edge Fill Color: Streak Filter Image Color: On Aggressiveness: Color:	ent				
	Device			o <u>k</u>	Cancel
< <u>H</u> ome	De <u>v</u> ice >		LIEMEM	<u> </u>	Lancel

Hole Fill — allows you to fill in the holes that are around the edges of your document. The types of holes that are filled include: round, rectangular, and irregularly shaped (e.g. double-punched or those having a slight tear that could have occurred when the document was removed from a binder). Checking **On** turns hole fill on.

Blank Image Detection — allows you to configure the scanner to not give blank images to the scanning application.

- (none): all images are given to the scanning application.
- **Based on Document Content:** images will be considered blank based on the document content within the image.
- **Content amount:** allows you to select the maximum amount of content that the scanner will consider to be blank. Any image that has more content than this value will be considered non-blank and will be given to the scanning application. The values range from **0** to **100** percent.

• Content amount will be filled in with the amount of content in the preview image. If you have a representative blank document (e.g. blank sheet with letter head), this can be used to assist with determining the setting for Content amount (i.e. perform a preview scan, click this button, and adjust Content amount as appropriate).

NOTE: This option is only available when there is a preview image.

- **Based on Size**: images will be considered blank based on the size of the image that would be given to the scanning application (i.e. after all other settings have been applied).
 - Final image size: allows you to select the minimum image size that the scanner will consider to be non-blank. Any image that is less than this value will be considered blank and will not be given to the scanning application. The values range from 1 to 1000 KB (1 KB equals 1024 bytes).

Image Edge Fill — fills the edges of the final electronic image by covering the area with the specified color.

- Color: allows you to select the color to fill the edges with.
 - (none)
 - White
 - Black
- All side match: when turned on, an equal amount will be filled in on all sides.
- Top: determines how much of the top edge will be filled in.
- Left/Right: the option on the left will determine how much of the left edge will be filled in and the option on the right will determine how much of the right edge will be filled in.
- Bottom: determines how much of the bottom edge will be filled in.

NOTES:

- The **Top**, **Left/Right** and **Bottom** options are not available when *All sides match* is turned on.
- When using **Image Edge Fill**, be careful not to enter a value too large as it could fill in image data that you want to keep.

Streak Filter — allows you to configure the scanner to filter vertical streaks from your images. Streaks are lines which may appear on an image and are not part of the original document. Streaks may be caused by contaminants on your documents (e.g. dirt, dust, or frayed edges) or by not following the recommended cleaning procedures for your scanner.

- On: turns streak filter on.
- **Aggressiveness**: allows you to adjust the extent at which the streaks are filtered. The values range from -2 to 2. The default is 0.

Color Dropout — used to eliminate a form's background so that only the entered data is included in the electronic image (i.e., remove the form's lines and boxes). For black and white images, these settings effect the grayscale version of the document which the scanner analyzes to produce that electronic image.

- **Color**: select the desired dropout color.
 - (none)
 - Red
 - Green
 - Blue
 - NOTE: The Color Dropout options are only available when the *Scan as* selection is **Black and White** or **Grayscale**.

Advanced Image Setup

Advanced tab

The Advanced Image Setup icon is located at the top of the Image Settings window next to the **Side** drop-down box.

Sid <u>e</u> :	Both	- 😵
General Size	Adjustments Enhancements	

When you select the Advanced Image Setup icon, the Advanced tab will be displayed.

📕 KODAK i1320 Scanner	
Advanced	
Input document is: Two Sided Different settings per side Combine front and back images: (none)	
Images per sid <u>e</u> :	
<u>D</u>	one

Input document is — select Two Sided, One sided - Front, or One sided - Back depending on what side(s) you want to configure.

NOTE: The *Two Sided* and *One Sided - Back* options are only available for duplex scanner models.

Different settings per side — by default, the settings you select apply to both sides of the image. Turn this option on if you want you to select different image processing settings for each side of the document you are scanning. For example, if you want the front side to be color and the rear side to be black and white, first make sure that you have selected the **Two Sided** option from the *Input Document is* drop-down list, then select the *Different Settings per side* checkbox.

Once you have done this, the Side drop-down list on the Image Settings window will no longer be grayed out and you can select different settings for each side. Now that you have enabled Different settings per side, your initial selections will apply only to the front side of the document you are scanning. After you have made your selections for the front side, use the Side drop-down list to select the back side and then make the settings you want to apply to the back.

Black and White (1-bit)	
NDTE: Scanner determines which of the above images to create	
	Done

Combine front and back images — typically, for a document, one image is created for the front side and another image is created for the back side. Turn this option on if you want one image that contains both the front side and back side of the document. The selections are:

Front on Left: front side will be to the left Front on Right: back side will be to the of the back side within the image.

left the front side within the image.

NOTES:

- This option is only available for duplex scanner models.
- This option is only available when *Input document is* is set to **Two** Sided, *Different settings per side* is turned off and *Images per side* is set to **One**; and the document is scanned from the Document Feeder.

Images per side — indicates how many images the scanner will create for a side, based on you imaging selections.

- **One**: indicates you want the scanner to create one image.
- One Based on Document Content: indicates you want the scanner to automatically detect if the document is color/grayscale or black and white.
- **Multiple**: indicates you want the scanner to create more than one image.
- NOTE: If you select **One Based on Document Content** from the *Images per side* option, the Content Settings tab will be displayed.

Images to Configure — indicates which electronic images you need to configure.

- NOTE: This is only available if you select anything other than **One** from the *Images per side* option. For procedures on how to configure advanced options, see the sections that follow, entitled:
 - Creating color/grayscale or black and white images based on the content of your documents, Example 1.
 - Creating multiple images for each side of a document, Example 2.
 - Creating different settings for each side of a document, Example 3.

When available, use the up and down arrows to select the order the images will be delivered by the scanner to the scanning application.

Toolbar buttons:

Add: adds an image type to the bottom of the configuration list.

₫.

Change: allows you to change the currently selected image type.

Delete: removes the selected image type.

Done — returns you to the Image Settings window.

Content Settings tab

The options on the Content Settings tab can be used for either one- or two-sided jobs.

Place the representative docum	vents in the input tray, then click Learn.	
	Leam	
		Done

Side — determines which side the *Sensitivity* settings are applied to. This option is only available if **Different settings per side** is checked on the Advanced tab.

Sensitivity

- Low: documents requiring only a small amount of color to be saved as color/grayscale images. Used for capturing documents that are primarily black text with small logos, or contain small amounts of highlighted text or small colorful photos.
- **Medium**: documents requiring more color, as compared with the Low option, before they are saved as color/grayscale images.
- **High**: documents requiring more color, as compared with the Medium option, before they will be saved as color/grayscale images. Used for distinguishing documents containing medium- to large-size colorful photos from plain black text. Photos with neutral colors may require adjustments to the *Color threshold* or *Color amount* values in order to be captured correctly.

- **Custom**: allows you to manually adjust the *Color amount* and/or *Color threshold.*
 - NOTE: When setting Sensitivity values, it is suggested that you start with the **Medium** option and scan a typical job set. If too many documents were returned as color/grayscale vs. black and white, then change to the **High** option and re-run the job. If too few documents were returned as color/grayscale vs. black and white, then change to the **Low** option and re-run the job. If none of these options provide the desired result, select **Custom** to manually adjust Color Amount and/or Color Threshold. **Custom** also allows access to the *Learn* mode which provides a method for the scanner to analyze documents and recommend settings.

Color amount — the amount of color that needs to be present in a document before it will be saved as either color/grayscale. As the value of *Color Amount* increases, more color pixels are required. Valid values are **1** to **200**.

Color threshold — the color threshold or saturation (i.e., pale blue vs. dark blue) at which a given color will be included in the color amount calculation. A higher value indicates that a more intense color is required. Valid values are **0** to **100**.

Learn — allows you to calculate your settings based on representative color documents scanned. Before selecting **Learn**, place at least 5 representative color documents in the input tray. The documents will be scanned and analyzed to determine the recommended *Color amount*.

NOTES:

- Color amount and Color threshold is only available when **Custom** is selected.
- The **Color amount** and **Color threshold** sliders will be updated automatically. If these values do not provide the desired results with your job set, you may need to manually adjust the *Color threshold*.

Creating color/grayscale or black and white images based on the content of your documents, Example 1 In this example, let's assume you want to configure a scan session that has a mix of color and black and white documents with information on both sides. In addition, you want the scanner to detect whether the page is color or not, and then output either a color or black and white image based on that.

- 1. Select a **Setting Shortcut** from the main Scanner window that closely describes your desired output.
- 2. Select Settings to display the Image Settings window.
- 3. Select the **Advanced Image Setup** icon on the Image Settings window to display the Advanced tab.
- 4. Select Input document is: Two Sided.
- 5. Select Images per side: One Based on Document Content.
- NOTE: The *Images to Configure* area will now be displayed on the Advanced tab and will contain a color image item and a black and white image item. The Content Settings tab will also be displayed.

Paper Source

- Automatic: looks for paper in the document feeder first. If there are no documents in the input tray, the scanner will scan from the flatbed.
- **Document Feeder**: the scanner will only scan documents from the input tray.
- Flatbed: scanner will scan from the flatbed.

NOTE: **Automatic** and **Flatbed** options are only available if you had the flatbed accessory attached when the scanning application connected to the scanner.

Power Saver — allows you to set the amount of time, in minutes, the scanner has to be inactive before going into power saver mode.

Document Feeder

• **Timeout**: allows you to select the amount of time, in seconds, the scanner will wait once the last document enters the feeder before the timeout occurs.

Action when timeout occurs: indicates the action that will be taken when the document feeder timeout has been reached.

- **Stop Scanning:** scanning will stop and control will return to the scanning application (i.e. ends the job).

Diagnostics — displays the Diagnostics tab.

Multifeed detection aids in document processing by detecting documents that may go through the feeder overlapped. Multifeeds can happen due to stapled documents, adhesives on documents, or electrostatically charged documents.

Ultrasonic Detection

Sensitivity — controls how aggressively the scanner will work to determine if more than one document is fed into the scanner. Multifeeds are triggered by detecting air gaps between documents. This allows multifeed detection to be used with job sets containing documents with mixed thicknesses.

- (none)
- Low: least aggressive setting and is less likely to detect labels, poor quality, thick or wrinkled documents as multi-fed documents.
- **Medium**: use if your job set has varying document thicknesses or labels attached to the document. Depending on the label material, most documents with labels should not be detected as a multi-fed document.
- **High**: the most aggressive setting. This is a good setting to use if all documents have a thickness no greater than 20-lb. bond paper.
 - NOTE: Regardless of the setting, "sticky" notes may still be detected as multi-fed documents.

Length Detection — allows you to select the maximum length of the documents in your job set. If the scanner detects a document of that length or longer, it will determine that a multifeed has occurred. You can turn this option **off** or set a length.

Action When Detected — select what action you want the scanner to take when a multifeed is detected. With all options, the condition will be logged in the scanner.

- **Stop Scanning**: scanning will stop and control will return to the scanning application (i.e., ends the job). Verify that the paper path has been cleared and restart the scan session from the scanning application.
- Stop Scanning leave paper in path: scanning will stop immediately (i.e., making no attempt to clear the paper path) and control will return to the scanning application (i.e., ends the job). Clear any documents from the paper path prior to restarting the scan session from the scanning application.
- Continue Scanning: the scanner will continue to scan.

Play sound on PC — turn this option on if you want the PC to make a sound when a multifeed is detected. You can click the **Browse** button to select the desired .wav file.

NOTE: The sound on the PC may not occur at the exact time the multifeed is detected by the scanner.

Changing Device settings

- 1. Select a Setting Shortcut from the main Scanner window that closely describes your desired output.
- 2. Select Settings to display the Image Settings window.
- 3. Select **Device** to display the Device Settings window.

		Done

Diagnostics - Debug tab

The Debug tab allows you to turn on options that allow support personnel to diagnose any issues you may encounter with using your scanner. It is suggested that you only make changes on this tab when instructed by Kodak support personnel.

NOTES:

- All of the options on this tab apply to all Setting Shortcuts, not just the currently selected Setting Shortcut, and are saved immediately.
- In order for any changes on this tab to take effect, you must restart your application.

KODAK i1320 Scanner	
General Component Debug Logs	G D
Logging Off T Flag: 0 Filter:	Any changes to these settings requires the driver to be restarted. It is recommend that you do this by restarting your application.
Images Received from scanner Held in memory (saved at scan end): none 16 images images Sent to application	
Simulation V On Model: Flags: i1320 V Flatbed: (none) V	
	Done

Logging — saves the communications between the scanner and a scanning application. The options are: **Off**, **On** or **Custom**.

NOTE: Flag and Filter are only available for Custom.

Images - Received From Scanner — saves the images received at the PC from the scanner.

Images - Sent To Application — saves the images received at the scanning application from the scanner.

Simulation — allows you to use the TWAIN Datasource without using the actual scanner.

• Model: allows you to select the specific model to simulate.

The Logs tab allows you to view scanner information.

- Flatbed: allows you to select which flatbed accessory to simulate.
- **Flags**: if supported by your TWAIN Datasource, this will contain a list of accessories your simulate scanner has installed.

Logs

- **General**: displays the scanner's version information, serial number, attached/installed accessories, meters, etc.
- **Operator**: displays the scanner's log. This log can only be cleared by your support personnel.

Toolbar buttons

Save As — saves all the logs for viewing by support personnel. When selected, the Save As window will displayed:

- Folder: the location to save the logs.
- **Browse**: displays the operating system's File Open window so you can find the folder that you want to use.
- Include debug images: includes any generated debug images with the logs. This is turned on by default and should only be turned off when recommended by your support personnel.
- Save: saves the logs into a file with the extension .eklog.

Refresh: refreshes the currently displayed log.
